5. **Incineration** - It is a method in which the burning of the inflammable waste at high temperature to reduce the quantity of the plastic waste into ash. The heat generated may be used for the generation of the power by using boilers.
6. **Landfill** - Fly ash generated from the incineration process to be dumped on landfilled. Landfill is a very delicate and complex structure, design and position possible in ground or above ground in which solid waste was separated from neighbouring environment.

Activity

The aim of this social outreach program is to create public awareness about the destructive effect of plastic on natural environment, marine environment and human health, increasing amount of plastic waste and what should be management practices for controlling plastic pollution. So I have arranged an online seminar with the students of Department of Botany of Bolpur College, Birbhum.
