Photographs of the Awareness Programme conducted at Gopalpur village in Birbhum District on 22th February, 2023 with the local farmers.

My Experience: -

At first I was very worried regarding my awareness programme presentation because it was my first presentation. During my presentation local farmers were listening my lecture very intensively and I became confident. I began the programme by thanking to them for participation in the awareness programme and giving me their valuable time. Then I introduced them about the diversity of medicinal plants. Then I told some medicinal plant's name that are used to treat snake's bite. During my presentation I asked them about these plant's and one santal farmer were able to give answer of my question and said that he knows these plants firmly specially kalmegh and sarpagandha plants and told that these are very helpful for the treatment of snake bite. Then I informed them that how to conserve these valuable medicinal plants and at the end of my lecture I advised them that it would be better to save a life not to depend on any kind of superstition, they should use these medicinal plants for primary treatment. By listening my programme they were very pleased to know the beneficial effects of these medicinal plants in snake bite treatment.
